## DETAILED ACTION

### *Election/Restrictions*

1. Claims 32, 43-49 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species of a magnetic thruster, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7/29/2005.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, drawn to a method of ionizing a liquid propellant, classified in class 210, subclass 166.
  - II. Claims 19-26, drawn to a showerhead comprising convergent micro-nozzles, classified in class 4, subclass 615.
  - III. Claims 27-31, 33-42, drawn to an electrostatic thruster, classified in class 60, subclass 202.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and III together and invention I alone are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method can be used to purify a liquid propellant. Note that in this case, "propellant" is broadly read, e.g., a gas kept under pressure in a bottle or can for expelling the contents when the pressure is released, such as it may be used in

Art Unit: 3746

pesticide cans. Also note that with respect to invention II, the method as claimed can be practice with straight or diverging micro-nozzles.

4. Inventions II and III are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require converging micro-nozzles. The subcombination has separate utility such as a showerhead for a bathtub.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Applicant is required to elect a single claimed invention, i.e., group I, or II, or III for further prosecution at this time.

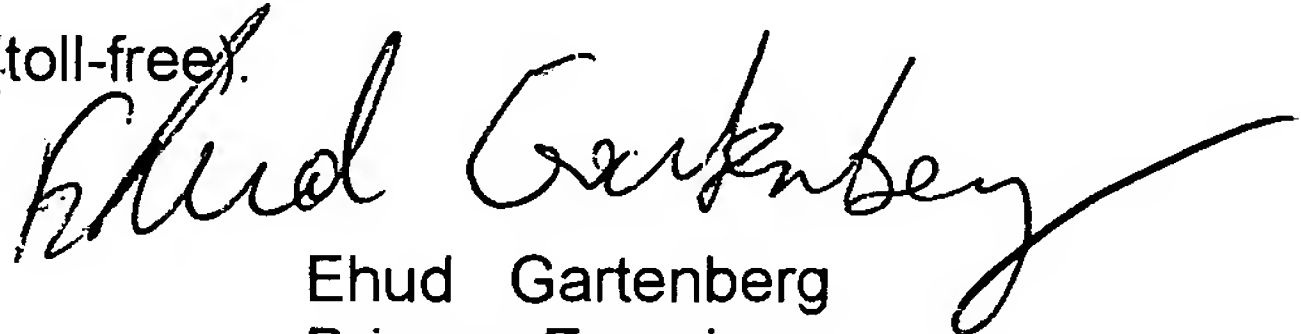

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
